

IMP NOTE - *"Using a phone as a side camera is not recommended. The mandate is to use an external webcam, and that remains the standard expectation for all learners. However, if — and only if — you find yourself in a situation where no external webcam is available, you may use your phone as a side camera by following the instructions below. Please remember that this is strictly a fallback option, and Coursera or IITG will not provide any support or troubleshooting for this setup"*

Setup Instructions for [Iriun Webcam](#)

***IMP NOTE** - Iriun webcam is not our recommendation, please feel free to use any other software as per your choice

1. Install on Your Computer

- Download and install **Iriun Webcam Server** for Windows or Mac.
- Complete the installation by following the on-screen instructions.

** Please allow the necessary permissions on the first go for the software to work properly*

2. Install on Your Phone

- On **Android**, open Google Play Store and search for "Iriun Webcam."
- On **iPhone (iOS)**, open the App Store and search for "Iriun Webcam for PC and Mac."
- Install the app.

3. Connect and Launch

Option A: Wi-Fi Connection

1. Ensure your **computer and phone are on the same Wi-Fi network**.
2. Open the Iriun app on your phone → it will show "Waiting for connection."
3. Open the Iriun Webcam Server on your computer → your phone's camera feed should appear automatically.

Option B: USB Connection

- Android:
 1. Enable Developer Mode → turn on USB Debugging.
 2. Connect the phone to the computer with a USB cable.
 - iPhone:
 1. Connect with a data-capable USB cable.
 2. If prompted, tap Trust This Computer.
 - The app will detect the connection and start streaming.
-

4. Use in Video Apps

- Open Zoom, OBS, Skype, Teams, or any other video software.
 - In **Video Settings**, choose **Iriun Webcam** as the camera source.
-

Tips for Best Performance

- **Wi-Fi:** Make sure both devices are on the same network (avoid mixing 2.4 GHz and 5 GHz).
- **USB:** Provides better quality and lower latency.
- **Lighting:** Use good lighting for a clearer video feed.
- **Stability:** Place your phone on a tripod or stand to avoid shaky video.
- **Firewalls/VPN:** Disable if connection issues occur.
